Network Partnership with AIDA

Analytic Imaging Diagnostics Arena (AIDA) is a national arena for research and innovation on AI solutions for diagnostic imaging, governed within Medtech4Health and hosted by CMIV in Linköping.

AIDA started out by forming three cornerstones. The first is development of AI-based decision support solutions for routine clinical use, where many research and innovation projects are running, run by leading research groups from academia and industry across Sweden. The second component is a group of clinical fellows, radiologists and pathologists, working with AI projects in collaboration with other AIDA partners. Thirdly, there is a core technical infrastructure tailormade for training and evaluation of modern AI solutions.

AIDA has now added a fourth cornerstone to the arena called Network Partners, to create a broader network of stakeholders. This expansion is a low-threshold opportunity for companies, academic institutions and healthcare providers to benefit from the knowledge and resources within AIDA. The benefits of being an AIDA Network Partner include:

- Access to the AIDA internal events, such as workshops on practicalities of state-of-the-art machine learning

- Access to assets shared by other AIDA partners, such as image data for model training and clinical innovation ideas

- General access to the community of AIDA partners, to learn from their expertise and to explore potential collaboration opportunities

- Access to the AIDA technical infrastructure, such as image and meta-data handling and storage, annotation systems, and tailored computational resources

The obligation of an AIDA Network Partner is simply an annual service fee of 10,000 SEK. The price for use of the infrastructure is determined by the AIDA Steering Group and reflects that AIDA is a non-profit organization.

If the opportunity of being an AIDA Network Partner is interesting to your organization, please contact the Arena Developer, Maria Bolin, at maria.bolin@lead.se. For more information on AIDA, please see medtech4health.se/aida.
